

Welcome to the ICP7 wiki!

First we have installed the express,yargs, lodash and nodemon by using the below commands

```
npm install express --save
```

```
npm install yargs--save
```

```
npm install lodash--save
```

```
npm install nodemon--save
```

we have created two files cust.js for customer and details and executing commands, notes1.js for the execution of commands(methods) when they get fired and notes1-data.json for displaying the output. Please find those 3 files in the source code.

Below are all the commands we used for this CRUD application

```
nodemon cust.js add -a 123 command -b admin command -c admin@gmail.com
nodemon cust.js read -a 123
nodemon cust.js list
nodemon cust.js update -a 123 command -b abc command -c abc
nodemon cust.js remove -a 123|
```

Below is the output

The screenshot shows a web browser window with multiple tabs open. The active tab displays a JSON array of customer data. The data is as follows:

customer_id	customer_name	customer_email
1	gopi	gopi@gmail.com
2	chand	chand@gmail.com

Thanks
